

SIKA AT WORK

CLAREBOUT POTATO PROCESSING FACTORY, DUNKIRK, FRANCE

FLOORING: Sika® Ucrete® UD 200, Sika® Ucrete® DP

BUILDING TRUST

LONG-LASTING FLOORING FOR A NEW POTATO PROCESSING FACTORY

PROJECT DESCRIPTION

Project name: Clarebout
Location: Dunkirk, France

Clarebout, a leading West-Flemish potato processing company, stands as a cornerstone in the global production of frozen potato products. With a strong focus on export markets, the family-owned business distributes its products to over 120 countries worldwide. Since 1988, Clarebout has relied on Sika® Ucrete® flooring for their processing plants across Belgium. Most recently, these solutions were extended to their new facility in Dunkirk, France.

PROJECT REQUIREMENTS

For their new state-of-the-art facility in Dunkirk, Clarebout required different surface profiles tailored to factors such as the intensity of use, slip risk, and thermal loading on floor areas.

SIKA SOLUTIONS

To address these challenges, Clarebout relied on Sika® Ucrete® DP and Sika® Ucrete® UD 200, as their go-to solutions.

Sika® Ucrete® provides exceptional value for customers. Its robust composition withstands thermal, chemical, and mechanical stresses, ensuring long-term, trouble-free use. With an impressive temperature resistance range from -40°C to 130°C, it is suitable for a wide variety of applications, including those requiring hot water and steam cleaning. The adjustable slip-resistant properties ensure a safe working environment. Being non-porous, joint-minimized, and quick-drying, Sika® Ucrete® is also easy to clean and maintain, meeting IFS standards. It does not transfer odor or taste, making it safe for food processing environments. Importantly, it can be applied quickly and is fully loadable after 24 hours, minimizing production downtime.
