NEW CONSTRUCTION OF A PRODUCTION AND FILLING HALL, WITZWORT, GERMANY

FLOORING: Sika® Ucrete® PSC, Sika® Ucrete® HF 60 RT, Sika® Ucrete® RG

BUILDING TRUST

NEW CONSTRUCTION OF A PRODUCTION AND FILLING HALL

PROJECT DESCRIPTION

Project name: Nordseemilch eG
Location: Witzwort, Germany
Year: 2022
Size: 2,100 m²

Founded in 1894, Norseemilch (formerly Osterhusumer Meierei Witzwort eG) is a cooperatively organized dairy in Witzwort. Nordseemilch processes around 270 million liters of milk a year into a wide variety of high-quality products.

PROJECT REQUIREMENTS

An expansion of production was planned in order to increase capacity. The hygiene requirements for processing fresh milk are extremely high. Therefore, the floor must also support these production conditions. Any damage to a floor is always a hygiene risk. The time factor also played a role here in the new building.

SIKA SOLUTIONS

Sika® Ucrete® HF 60 RT as a light textured mortar coating was the system of choice for this type of production area. Like all Sika® Ucrete® systems, Sika® Ucrete® HF 60 RT is resistant to a wide range of chemicals and to heavy impact, so that the floor will provide optimum hygienic conditions for many years, while also ensuring occupational safety. Sika® Ucrete® can be laid just seven days after concreting and the surface can be used again the day after laying to progress the interior work. This minimizes time losses.

Sika® Ucrete® withstands strong thermal, chemical, and mechanical stresses, enabling many years of use and trouble-free production. It is temperature-resistant from -25 to 80°C and can be specified for a range of -45°C to +120°C if needed. Sika® Ucrete® is hygienic, being non-porous, joint-minimized, and cleanable like stainless steel. It is also IFS and HACCP compliant, making it suitable for use in open food production.
