THE SAUCY FISH COMPANY, GRIMSBY, UK

FLOORING: Sika® Ucrete® UD 200, Sika® Ucrete® PFS, Sikaflex® CR 460

BUILDING TRUST

FAST-CURE FLOORING SOLUTION FOR FISH PROCESSING AREA

PROJECT DESCRIPTION

Project name: The Saucy Fish Company
Location: Grimsby

The Saucy Fish Co. operates a very busy fish processing and added-value product line. The client had an existing concrete slab which was smooth and, in parts, breaking up. A food-grade anti-slip floor was needed which would not contaminate the surrounding production environment with any odor.

PROJECT REQUIREMENTS

The first phase of 200m² involved production ceasing at 4pm on a Saturday, with cleaning down taking until 8pm. The area was to be back in production at 6am on Sunday. The environment was still wet and the window to lay onto damp concrete was 10 hours.

SIKA SOLUTIONS

Grimsby Resin Flooring arrived and set up their mixing station; they also tented off and secured an enclosed environment so that no dust would escape and used mechanical preparation equipment fitted with vacuums to extract the dust. They surface-dried the area and then applied the Sika® Ucrete® PFS at a temperature between 8-10°C, which had cured after four hours. They then applied 9mm of Sika® Ucrete® UD 200 fast flooring and this cured in less than five hours.

PROJECT PARTICIPANTS

Contractor: Grimsby Resin Flooring
