

# SIKA AT WORK

WALRAVENS NV, JETTE, BELGIUM

FLOORING: Sika® Ucrete® DP10

BUILDING TRUST

# WORKSHOP FLOOR RENOVATION

## PROJECT DESCRIPTION

Project name: Walravens NV  
Year: 2014  
Location: Jette  
Size: 2200m<sup>2</sup>

Walravens NV, located in Jette, is a family-owned company specializing in cutting and portioning fresh meat products. The company mainly serves the catering and restaurant sectors. Walravens NV is synonymous with quality and trust. Over the years, the company has expanded, and the expansion of the production department has become necessary.

## PROJECT REQUIREMENTS

The renovation project was combined with construction. It was important that the transition from the old premises to the new one was as smooth as possible, as there was a risk of differential settling in the underlying concrete coatings at any time. Additionally, a non-slip and safe screed with a structure that was easy to clean and hygienic was sought. This finishing layer could not detach from the underlying concrete, even after accidental damage.

## SIKA SOLUTIONS

Our solution involved applying Sika® Ucrete® DP10, 4 mm thick, offering easy cleaning and high hygiene standards. It facilitated a smooth transition from the existing to the new production area and maintained slip resistance. With excellent tear resistance and chemical resilience, it proved suitable for use alongside stainless steel equipment. Covering 2200 m<sup>2</sup>, the project included stainless steel skirting boards filled with concrete, seamlessly connected with Sika® Ucrete® RG underneath. This comprehensive solution met the client's need for durable, hygienic flooring in their meat processing facility.

## PROJECT PARTICIPANTS

Project Owner:	Walravens NV
Applicator/Contractor:	DIF
Designer/Architect/Specifier:	Bureau d'Etude 4Takt
