## RENOVATION OF A PRODUCTION AREA IN POTATO PROCESSING

### PROJECT DESCRIPTION

Project name: Agrarfrost GmbH & Co. KG Location: Oschersleben, Germany Year: 2023 Size: 600m<sup>2</sup>

Agrarfrost processes potatoes at two locations and is one of the largest potato processors in Germany. At the Oschersleben site, they primarily produce potato chips, but also wedges and French fries.

#### **PROJECT REQUIREMENTS**

The floor in the production area was in need of renovation, requiring the removal of the existing floor and the preparation of a durable substrate for the new flooring system within a short timeframe. The floor is continuously exposed to hot water.

#### SIKA SOLUTIONS

Sika<sup>®</sup> Ucrete<sup>®</sup> DP 20 in the 9 mm specification with a temperature shock resistance of up to 120°C was chosen. In the past, a partial area had already been renovated with this flooring system and had functioned flawlessly, thus proving its worth. The possibility of installing Sika<sup>®</sup> Ucrete<sup>®</sup> on a damp, surface-dry substrate has the advantage that renovation can be carried out risk-free within a very short time frame.

Sika<sup>®</sup> Ucrete<sup>®</sup> DP 20 delivers exceptional added value to customers. Its robust composition withstands strong thermal, chemical, and mechanical stresses, ensuring long-term, trouble-free use even in demanding environments. With a remarkable temperature resistance range from -45°C to +120°C, it is suitable for a wide variety of applications. Its hygienic properties are equally impressive: It is non-porous, features minimized joints, and is as cleanable as stainless steel, making it ideal for maintaining high sanitation standards. The flooring system is also IFS and HACCP compliant, further ensuring its suitability for use in open food production facilities.
