# FLOOR RENOVATION WITH THE NEW SIKAFLOOR® SYSTEM IN TRANSPORT CORRIDORS AND KITCHENS

## PROJECT DESCRIPTION

Since 2001 AFAS Live (formerly Heineken Music Hall) has more than lived up to its credo 'Live will never be the same'. Every year, the location offers more than 600,000 visitors a complete and unforgettable night out. It is a location in the Netherlands specially designed for amplified (pop) music. According to connoisseurs, sound is nowhere better than in the Black Box (large hall) of AFAS Live. It is the only venue in the Netherlands that has been nominated several times for the coveted Pollstar Award as best international concert venue.

## PROJECT CONDITIONS

After many years of intensive use, the floors of the transport corridors under the halls and the flush kitchens were in need of replacement. Because of the many forklift and pallet trucks which are used on a daily basis, wear and tear was visible in many places. This intensive use requires such a strong system that is suitable for heavy loads but also lasts many years.

## SIKA SOLUTION

Sika opted for the Sikafloor® DecoDur EM-21 Compact system. This power floated floor finish has a high mechanical load-bearing capacity and is therefore very suitable for areas that are used intensively in, for example, storage and production areas. In addition, the system is completely seamless and therefore easy to keep clean, something that was one of the requirements, especially in the sink kitchen. With the transparent and mat finishing coat Sikafloor®304 W, the stained quartz sand remains visible for a decorative effect.

## PARTIES INVOLVED

Client: AFAS Live

Contractor: Kiro Groep B.V. in cooperation with Indri Vloersystemen B.V.

Our most current General Sales Conditions shall apply. Please consult the most current local Product Data Sheet prior to any use.
