BUILDING TRUST

# FLOORING FOR ERSKINE PARK MEAT RETAIL

## PROJECT DESCRIPTION

Project name: Erskine Park Meat Retail  
Location: Erskine Park, Sydney, Australia  
Construction year: 2015  
Size in m<sup>2</sup>: 10,500

Ready Retail Operations Australia has recently constructed their new chilled food processing and manufacturing facility in Erskine park. The facility processes bulk refrigerated red meat and poultry. The meat is graded, cut and re-packed to be distributed to the retail market. The Engineers and the Constructor CIP, were clear in their criteria for the flooring system selection for the production, packaging and cool rooms.

## PROJECT REQUIREMENT

The floor system required had to be the toughest, most durable available for the industry. Along with this the manufacturer and the installer had to demonstrate substantial reference to successful installations in major greenfield food facilities.

## SIKA SOLUTIONS

Systems and products: Sikafloor® PurCem® HB-21 (for processing area), Sikafloor® Curehard 24 (for storages), Sikaflex® 11FC and Sikaflex® Tank (for junctions and joints)

Sikafloor® PurCem® is a highly durable polyurethane hybrid based floor that has high resistance to impact, thermal shock and chemicals generated from food production and wash down. PurCem® is also fast to install and importantly it is food grade approved. VOC content is below 1 gram per litre and has no odor, allowing the product to be placed on safely the job site as well as with food stuffs present.

## PROJECT PARTICIPANTS

Contractor: PolyTech  
Sika organization: Sika Australia Pty Ltd

Our most current General Sales Conditions shall apply. Please consult the most current local Product Data Sheet prior to any use.
